

Sooraj Kumar

Senior Backend Engineer | Redis, Caching & High-Performance Distributed Systems

+92-311-0138020 | soorajbinary@gmail.com | LinkedIn | GitHub | HackerRank | Karachi, Pakistan

Professional Summary —

Backend engineer with **5+ years** designing high-throughput, low-latency systems for enterprise and **fintech** platforms. Hands-on production experience with **Redis** caching strategies that reduce database load and raise system throughput, plus deep work in **Java/Spring Boot/Quarkus** microservices, event-driven messaging (**Kafka, RabbitMQ, Artemis**), and cloud-native delivery on **Docker/Kubernetes/Azure**. Strong focus on performance tuning, observability, and resilient distributed architecture for mission-critical workloads.

Technical Skills

- **Redis & Caching:** Redis (production), caching strategies, TTL/eviction patterns, cache-aside & write-through, throughput optimization, memory-conscious data modeling, Pub/Sub-style async patterns via messaging brokers
- **Backend:** Java 21, Spring Boot, Quarkus, Hibernate, Spring Security, Microservices, Node.js, REST APIs, Java EE
- **Distributed Systems:** Apache Kafka, RabbitMQ, Artemis, event-driven architecture, rate limiting & queue patterns, high-availability design, horizontal scaling
- **Data:** Redis, MySQL, PostgreSQL, DB2, Oracle, SQL Server, MongoDB, indexing & query optimization
- **Cloud & DevOps:** Azure, Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD, Maven, AWS (Basic), Infrastructure automation familiarity
- **Observability:** ELK Stack, Grafana, Prometheus, distributed tracing, cache/API performance troubleshooting, load testing
- **Security & Quality:** OAuth 2.0, JWT, RBAC, JUnit, SonarQube, JaCoCo, Agile collaboration & code reviews

Professional Experience

Contour Software

Feb 2026 – Present

Senior Software Engineer — Backend / Fintech Platforms

Karachi, Pakistan

- Designing enterprise-scale fintech backends focused on **performance**, reliability, and scalable distributed architecture
- Architecting **Java 21/Spring Boot** microservices for high-volume financial transaction processing
- Building event-driven systems with **Kafka** and async messaging to improve throughput and service decoupling
- Strengthening production resilience through observability, distributed tracing, and performance-oriented telemetry
- Partnering with engineers in architecture discussions; conducting technical interviews across backend and cloud stacks

Genesis AI

May 2025 – Jan 2026

Full Stack Engineer (Java & Angular)

Texas, USA (Remote)

- Built and maintained secure **Spring Boot** microservices and REST APIs for Open Finance / Open Banking platforms
- Integrated **Kafka** for event-driven communication between services, improving scalability under concurrent load
- Applied OAuth 2.0, OpenID Connect, and JWT to protect high-value API traffic across distributed backends
- Diagnosed production bottlenecks, optimized API latency, and improved reliability for client-facing workloads

Teresol Pvt. Ltd.

Nov 2023 – May 2025

Software Design Engineer — Core Banking (Redis & Distributed Backends)

Karachi, Pakistan

- Designed and implemented **Redis caching strategies** that significantly improved system throughput and reduced database load on high-traffic core-banking services
- Modeled cache keys/TTLs and read-path optimizations to keep hot data in memory for low-latency financial operations
- Built asynchronous, event-driven workflows with **Artemis** (distributed messaging/queues) for decoupled service communication
- Delivered **Quarkus** microservices integrated with Redis and relational data stores; enforced API gateway security (OAuth2/JWT)
- Containerized services with **Docker/Kubernetes** auto-scaling; automated CI/CD via Jenkins and GitHub Actions
- Monitored and tuned production performance using **ELK**, Grafana, and Prometheus; investigated cache/DB bottlenecks under load

Perfekt Solutions Ltd.

Jan 2020 – Jun 2023

Backend Developer

Sukkur, Pakistan

- Developed Spring-based REST backends and optimized SQL/transactions on Oracle DB and SQL Server for regulated environments
- Applied data-structure-aware design (indexes, query plans, caching-friendly access patterns) to improve application responsiveness
- Automated Maven/Jenkins CI pipelines; added logging, monitoring, and JUnit coverage to stabilize releases

Fiverr — Freelance

Jan 2020 – May 2024

Java & Spring Boot Developer

Remote

- Delivered production Java/Spring Boot backends for international clients, emphasizing maintainable APIs and performance-conscious design

Selected Projects

Constellation Payments — CSIPay & Pyxis (PayFac / Gateway)

Global

- Built high-volume payment facilitator/gateway services with TypeScript, Java EE, and microservice architecture
- Integrated cloud messaging for horizontal scalability, reliability, and low-latency settlement/reconciliation flows

BAHL Core Banking System Revamp

Pakistan

- Modernized legacy core banking into distributed **Quarkus** microservices with **Redis**-backed performance optimizations
- Supported **10,000+** ACID-compliant financial transactions; deployed Docker/Kubernetes with horizontal auto-scaling
- Tuned DB2 access layers and caching paths to sustain consistency with production-grade throughput

Enterprise Management Systems — Open Finance Platform

USA

- Delivered Spring Boot REST APIs with Kafka-backed event scalability, OAuth 2.0/JWT controls, and multi-tenant RBAC

Education

Sukkur IBA University

Feb 2019 – Aug 2023

Bachelor of Science in Computer Science

Sukkur, Pakistan

- **Four-year fully funded scholarship** — shortlisted among top 100 candidates nationwide
- Coursera: Data Structures and Performance; Advanced Data Structures in Java

Certifications

- Problem Solving (HackerRank) | GitHub Foundations | Artificial Intelligence Foundation
- Security Awareness | HIPAA Business Associates | GDPR Data Protection | AML | Credit Card Security
