

Sooraj Kumar

Senior Software Engineer | Building Intelligent Systems with AI-Accelerated Workflows

+92-311-0138020 | soorajbinary@gmail.com | LinkedIn | GitHub | HackerRank | Karachi, Pakistan

Professional Summary —

Senior Java backend engineer with **6+ years** designing high-scale platforms and APIs using **Java 17+/21**, **Spring Boot**, and cloud-native microservices. Strong in **Spring Security**, RESTful API design (OpenAPI/Swagger), distributed architecture, and performance optimization via async/concurrent messaging and caching (**Kafka**, **Redis**). Hands-on with **PostgreSQL**, Docker, Kubernetes, Azure/AWS cloud integrations, and quality gates using **JUnit**/Mockito and CI pipelines. Communicates clearly across remote and cross-functional teams while applying AI-accelerated workflows to ship reliable production systems faster.

Technical Skills

- **Java & Spring:** Java 17+/21, Spring Boot 3.x, Spring Security, Spring Framework, Hibernate/JPA, Microservices, Quarkus
- **APIs & Architecture:** RESTful API design, OpenAPI/Swagger, pagination & filtering patterns, distributed systems, high-availability design
- **Security & Auth:** OAuth 2.0, OpenID Connect, JWT, RBAC, policy-driven access control, secure API gateways; familiar with compliance-oriented authorization models
- **Data & Cache:** PostgreSQL, Redis, MySQL, Oracle DB, SQL Server, DB2, MongoDB, Liquibase
- **Concurrency & Messaging:** Multithreading / concurrent processing, Kafka, RabbitMQ, Artemis, async event-driven workflows
- **Cloud & DevOps:** Docker, Kubernetes, Azure, AWS (Basic), CI/CD (Jenkins, GitHub Actions), Maven, Git
- **Quality:** JUnit 5, Mockito, JaCoCo, SonarQube, integration testing, CI validation, production debugging

Professional Experience

Contour Software

Feb 2026 – Present

Senior Software Engineer

Karachi, Pakistan

- Designing and maintaining high-scale fintech backend platforms with **Java 21** and **Spring Boot** for mission-critical APIs
- Building distributed, highly available services for high-volume financial transaction processing
- Strengthening security/compliance posture through authenticated APIs, access controls, and production telemetry
- Leading technical collaboration and interviews; communicating design trade-offs across engineering teams
- Applying AI-assisted development to accelerate delivery while reviewing and validating generated code

Genesis AI

May 2025 – Jan 2026

Full Stack Engineer (Java & Angular) — Remote

Texas, USA

- Designed, authored, and maintained secure **Spring Boot** microservices and **RESTful APIs** for Open Finance platforms
- Implemented **Spring Security** with OAuth 2.0, OpenID Connect, and JWT for robust authentication/authorization
- Produced OpenAPI/Swagger-aligned API contracts; improved reliability through production troubleshooting and performance tuning
- Integrated **Kafka** for distributed, event-driven communication between services under concurrent load
- Collaborated remotely with US-based product and engineering stakeholders on requirements and delivery

Teresol Pvt. Ltd.

Nov 2023 – May 2025

Software Design Engineer — Core Banking (Cloud-Native Java)

Karachi, Pakistan

- Built distributed microservices with **Quarkus**/Java for high-availability core-banking workflows
- Optimized throughput using **Redis** caching and async/concurrent messaging via Artemis under production traffic
- Designed resilient data access for ACID financial operations; enforced API security (OAuth2/JWT) at gateway boundaries
- Containerized and orchestrated services with **Docker/Kubernetes**; automated CI validation with Jenkins and GitHub Actions
- Led testing and quality efforts with unit/integration tests, load testing, and observability (ELK, Grafana, Prometheus)

Perfekt Solutions Ltd.

Jan 2020 – Jun 2023

Backend Developer (Java / Spring)

Sukkur, Pakistan

- Developed and maintained Spring-based REST backends with business logic, RBAC security, and relational data integrations
- Optimized SQL/transactions on Oracle DB and SQL Server; applied design patterns for maintainable, concurrent-safe services
- Established Maven/Jenkins CI pipelines; wrote **JUnit** tests and improved logging for faster defect isolation
- Collaborated cross-functionally with frontend engineers to deliver stable API contracts and production fixes

- Delivered production Spring Boot APIs and Java backends for international clients with clear remote communication and iterative delivery

Selected Projects

Enterprise Management Systems — Open Finance Platform

USA

- Built Spring Boot REST APIs with full **OpenAPI/Swagger** documentation, OAuth 2.0/JWT controls, and audit-friendly RBAC
- Designed efficient API access patterns for multi-tenant enterprise workflows; integrated Kafka for scalable event processing

BAHL Core Banking System Revamp

Pakistan

- Modernized legacy banking into distributed Java microservices supporting **10,000+** ACID-compliant transactions
- Deployed on Docker/Kubernetes with horizontal scaling; applied CI gates and production performance tuning

Constellation Payments — CSIPay & Pyxis

Global

- Built high-availability payment gateway/PayFac services with Java EE/TypeScript microservices and cloud messaging
- Integrated resource/service metadata and third-party systems for settlement and reconciliation at scale

AI-Enabled Document & Workflow Automation

AI / Backend

- Delivered LLM-powered automation (OpenAI/LangChain/FastAPI) alongside Java backends to accelerate intelligent workflows

Education

Sukkur IBA University

Feb 2019 – Aug 2023

*Bachelor of Science in Computer Science**Sukkur, Pakistan*

- **Four-year fully funded scholarship** — shortlisted among top 100 candidates nationwide
- Coursework emphasis: data structures, algorithms, and advanced Java performance topics (Coursera)

Certifications

- Security Awareness Foundation & Training | HIPAA Business Associates | GDPR Data Protection
- Anti-Money Laundering (AML) | Credit Card Security | GitHub Foundations
- Artificial Intelligence Foundation | Problem Solving (HackerRank)
